

# AccessData Enterprise

## Investigation & Analysis with Enterprise-Wide Reach

Organisations face a number of costly challenges.....

- Achieving visibility into all data across the enterprise.
- Detecting, preventing & investigating fraud.
- Protecting IP & personal data.
- Responding quickly & effectively to security incidents
- Ensuring regulatory compliance.
- Optimising security & investigative reach while cutting costs.

### The Solution

AccessData Enterprise is a new breed of investigative product built for scale, speed and broad functionality. This easy-to-use enterprise solution creates a network-wide investigative platform that enables you to overcome your most critical investigative challenges.

#### **Securely access, analyse & forensically preserve a wide variety of data:**

- Capture data at the file, device & multi-node level.
- Multi-machine forensic analysis with automated processing.
- True RAM & BIOS capture.
- Batch collection functionality to support the largest jobs.
- Secure inter-component communication, role-based security & rich auditing.

#### **Achieve effective incident response without the use of scripts:**

- Deep analysis of processes, DLLs, services, drivers, users, open files & network socket data.
- Advanced incident response analysis interface with search capabilities.
- True database-driven incident response reporting.
- Analyse thousands of machines rapidly, either proactively or reactively.
- GUI-integrated remediation.

#### **Rely on an investigative architecture that is forensically sound:**

- Built on Forensic Toolkit® technology.
- Forensic validity establishes & upheld thousands of times in courts around the world.
- Evidence gathered will be admissible in a court of law accepted by peers.

#### **The only investigative solution with automated analysis & advanced processing power:**

- Automatically processes email, zip files & unallocated space, removes known binaries, verifies file identity & automatically categorises & indexes all data.
- Fully integrated Oracle database supports enormous data sets, provides extensive data review & reporting capabilities.
- Market-leading decryption technology delivers decryption, password recovery & cracking.
- Distributed processing lets you process massive amounts of data with ease.
- Secure inter-component communication, role-based security & rich auditing.

# AccessData Enterprise

## How It Works

1. The investigator authenticates against the authentication service.
2. The investigator creates a case.
3. The investigator selects target computers & issues investigative commands to the Processing Service.
4. The Processing Service accepts commands from the investigator & issues commands to the Agents.
5. The Agents verify authorised request, accept commands & send back device status, OS information and drive information.
6. The investigator chooses to preview devices, acquire hard drives or RAM, or to gather volatile data.
7. The Agents respond with a preview of attached drives & volatile data.
8. Processing Service accepts data from Agents & displays requested information in the GUI.
9. The investigator previews devices, processes data, and analyses information relevant to the case.

## Product Highlights

- No scripts-all functionality is in the GUI.
- Case information is stored in the database.
- True Auto Save/Recovery functionality.
- Forensically acquire BIOS, RAM & devices.
- Schedule bulk acquisitions.
- Integrated Incident Response Console - correlate processes, sockets & ports in a single view across nodes.
- Right click access to network data with AccessData Network Forensics.
- You're not confined to proprietary technology.
- The data you seek is always just a few clicks away.

### **Other Products:-**

- Forensic Tools
- Hard Disk Duplicators
- Floppy Disk Copiers
- CD/DVD Duplicators
- CD/DVD Printers

---

### **Media Duplication Services For:-**

- Floppy Disk
- CD
- DVD
- Tape
- Blank Media Supply
- Standard or Customised Packaging
- Fulfilment Service
