

Flash Retriever Forensic Software

Flash Media Imaging and Data Recovery

Flash Retriever Forensic Edition is a professional tool for examining, recovering and **documenting** flash-based media. Regardless of what sort of device it plugs into.

Product Features:-

- **Complete imaging of flash devices in raw format** - This can be imported into all major forensic tools. A raw image captured with any tool can also be used within Flash Retriever Forensic Edition.
- **Use with EnCase E01 image files** - Either use Flash Retriever Forensic to image the media to a "raw" image file or use this software with E01 EnCase-compatible image files from any imaging tool
- **More device support**
Zip drives and other removable media devices are supported in addition to flash media. Virtually any removable media using the FAT file system can be examined with this software.

- **MD5 hashing of media, images and individual files** - All of the files can have MD5 hash values computed for them as part of the Analysis of the media. This can be included in reports.
- **Support for multi-core CPUs to speed examination.**

More Product Features:-

- **Multiple-media support** - Simultaneously examine multiple devices and/or image files all within the same session.
- **Thumbnail display for photos** - including a complete print capability.
- **Report Generator** - Use all of the knowledge this software has about files to build a report documenting everything you need. Output reports to HTML, CSV or print. Reports can include complete Exif information from photographs as well as other information.
- **Support for "raw" camera files** - View "raw" camera images directly within the program *without* requiring additional software. Camera raw images are not displayable by Windows or most image programs without special plug-ins or other software. Save raw images as JPEG files.
- **Sector display in hex and character** - The contents of individual sectors on the media can be examined.

Flash Retriever Forensic Edition is fully compatible with Windows 2000, Windows XP and Windows Vista.
