

Spector Pro V6.0

Automatically Record Everything That's Done On A PC

Automatically Records:-

- All applications.
- All websites visited.
- All chat conversations.
- All keystrokes typed.
- All display screens.
- All e-mails viewed.

System Requirements

- Windows® XP Home Edition or Professional, Windows Vista™, Windows 98, Windows Millennium Edition, Windows NT or Windows 2000.
- Intel Pentium, Intel Celeron, AMD Athlon or AMD Duron processor running at 100 MHz or faster.
- 16M of memory (32M or more recommended for best performance).

Spector works by taking a snapshot of whatever is on the computer screen and saves it away in a hidden location on your computer's hard drive. A few seconds later, Spector takes another picture. In fact, Spector can automatically take a picture of your computer screen as frequently as once per second. You decide how often and in what format (grayscale or colour).

That means you get recordings of all chat conversations, instant messages, e-mail's typed and read, all websites listed, all programs run, all keystrokes typed - EVERYTHING they do on the computer and on the Internet.

You can come back to the computer a few minutes, a few hours, a few days or weeks later and SEE EXACTLY what they were doing, because Spector has recorded it.

Spector is ideal for businesses concerned about how their employees use company computers. Are your employees goofing off too much online? Sending sexually or racially offensive e-mail jokes? Spreading company confidential information in anonymous chat and message boards? You'll find out with Spector.

Print recorded screenshots or export images to .jpg or.bmp file formats.

Simple VCR-like control of your recordings. Play your recordings like a movie, jump to the first or last frame, or review one frame at a time.

Other Forensic Software Products

Forensic Toolkit™(FTK)

The Ideal Toolkit for the Forensics Specialist

Includes Forensic Toolkit, Password Recovery Toolkit, Registry Viewer, 50 Client DNA License and the Oracle database.

AccessData Password Recovery Toolkit™ (PRTK)

Recover Passwords Quickly & Easily

The Password Recovery Toolkit gives you the ability to recover passwords from well-known applications and gain access to encrypted files and drives, including the encrypted file system (EFS) from Microsoft.

AccessData Registry Viewer™

Analyse & Decrypt Registry Data

Registry Viewer gives you the ability to view independent Windows Registry files. Registry Viewer provides access to “Protected Storage System Provider” information, which contains e-mail and Internet passwords, settings and search terms.

AccessData Distributed Network Attack

Putting Idle Time To Work

In the past, recoveries have been limited to the processing power of one machine. DNA uses the power of machines across the network or across the world to decrypt passwords.

Other Products:-

- Software Cloning Tools
- Floppy Disk Copiers
- Hard Drive Duplicators
- CD Copiers
- CD Printers

Media Duplication Services For:-

- Floppy Disk
- CD
- DVD
- Tape
- Blank Media Supply
- Standard or Customised Packaging
- Fulfilment Service
